SAFIC' Care is a trademark of SAFIC-ALCAN

PROCESS

PHASE A : Mix the ingredients and heat until 85°C with slow agitation up to homogeneity.

PHASE B : Add powder and mix with a slow agitation. Cast at 60°C.

TIPS & TRICK

Heating up to 85°C is necessary to melt carnauba wax. A slow agitation and powders add at the final step permits to limit air incorporation in the formula and in case, bubbles.
